Education

New Jersey Institute of Technology Newark, NJ

Bachelor of Science in Computer Science *Expected Dec 2026*

Skills

Technical/Scripting Languages: Python, SQL, C++, C, Java, HTML/CSS, BASH, PHP, Javascript

Database Management: MySQL, PostgreSQL, SSMS, SSRS, SSAS, Oracle

System Administration: Linux (Debian), Windows

Project Management: Git

Languages: English (Fluent), Mandarin (Conversational), Spanish (Fluent)

Professional Experience

Verizon | *Finance Leadership Development Program - Commercial FP&A Intern* *Jun 2024 – Aug 2024*

- Transitioned manual financial reporting processes to automated dynamic dashboards using **Power BI, SSMS, SSRS,** and **SSAS** facilitating efficient and comprehensive analysis of surcharges.
- Utilized mix of linear (**ARIMA**) and nonlinear (**ARTXP**) regression models to forecast revenue generated by each eligible product, top customers, and overall trends within Verizon Business surcharges.
- Designed 'what-if' analysis tool allowing stakeholders to adjust filter criteria and evaluate projected financial impact on past and future fiscal periods.
- Added function to allow users to input custom parameters for automated data cleaning and population of tables and graphs, streamlining processes and improving data accuracy.
- Saved **2000+** hours annually and empowered business leaders to identify potential cost recovery opportunities that could contribute over **$1 billion** annually.

Stevens Blueprint | *Junior Software Engineer* *Mar 2024 – Present*

- Implemented meta tags across all pages of Blueprint website using **OpenGraph**, optimizing content visibility and engagement on search engines.
- Enhanced Stevens Blueprint website functionality by integrating buttons using **HTML/CSS**, facilitating seamless redirection to pages.
- Organized biweekly Sprint meetings to coordinate development efforts, track progress, and ensure alignment with project goals and timelines.
- Spearheaded development of attendance endpoint using **Java** and **Spring Boot Framework**, leveraging backend technologies to meticulously track member participation in bi-weekly meetings.

Technical Projects

Dropshipping Website | *HTML/CSS, Python, BASH, Apache, MySQL, PHP*

- Developed full-stack website using **LAMP stack** to web-scrape 2 websites and compare 40 similar products
- Script runs every 6 hours in order to comply with web-scraping regulations.

Weather Forecast Retriever | *Python, Weatherbit API, Geopy, Requests*

- Designed backend system to retrieve accurate weather forecasts for specific cities from external APIs, providing users with customizable forecast options and real-time weather alerts.

Takeoff | *HTML/CSS, Javascript*

- Designed and developed 2D space-themed dodging game, where users control spaceship and move to avoid projectile asteroids, for NJIT's Girlhacks 2023.

Pascal Language Compiler | *C++*

- Created pascal language compiler consisting of lexer for tokenizing source code, parser for syntactic analysis and tree construction, and interpreter for executing programs from generated parse trees.

Amazon Webscraper | *Python, BeautifulSoup, Selenium, Requests*

- Built web scraping application to extract and present product data from Amazon, allowing users to customize data retrieval for detailed product information.
